

AI Application & Letter Assistant - Project Blueprint

Project Goal: Build an AI-powered platform that helps users generate professional applications, letters, emails, and formal documents using AI.

Why This Project?

- Solves a real-world problem.
- Useful for students, job seekers, employees, and citizens.
- Strong portfolio project demonstrating AI integration, authentication, databases, and SaaS concepts.
- Easier and more focused than a large Citizen Assist platform.

Recommended Tech Stack

Frontend: React + TypeScript + Tailwind CSS

Backend/BaaS: Supabase

AI: OpenAI API or Gemini API

Deployment: Vercel

Version Control: Git + GitHub

MVP Features (Version 1)

1. User Authentication (Sign Up/Login)
2. Dashboard
3. AI Application Writer
4. AI Letter Writer
5. Email Generator
6. Save Documents
7. Edit & Delete Documents
8. Copy to Clipboard
9. Download as PDF

Advanced Features (Version 2)

- Multiple writing tones
- Grammar improvement
- AI rewriting
- Templates library
- Document history
- Favorites
- Usage analytics

Database Design

users

- id
- name
- email

documents

- id
- user_id

- title
- type
- content
- created_at

Suggested Development Roadmap

Phase 1: Learn TypeScript fundamentals.

Phase 2: Learn Supabase authentication and database basics.

Phase 3: Build authentication.

Phase 4: Build document CRUD.

Phase 5: Integrate AI generation.

Phase 6: Add PDF export.

Phase 7: Deploy and polish UI.

What To Avoid Initially

- Complex government eligibility engines
- Multi-language support at the start
- Large workflow automation systems
- Excessive AI features before MVP completion

Final Recommendation

Focus on AI Application & Letter Assistant. It is achievable, portfolio-worthy, commercially relevant, and a strong learning project for React, TypeScript, Supabase, and AI integration.
